# CHAPTER 1

---

## Introduction

---

This library offers an implementation of the `skosprovider.providers.VocabularyProvider` interface based on the [Heritagedata Vocabularies](#). These vocabularies are used by [EH](#), [RCAHMS](#) and [RCAHMW](#) in their role as curators of heritage.

## Installation

To be able to use this library you need to have a modern version of Python installed. Currently we're supporting versions 2.7, 3.3 and 3.4 of Python.

This easiest way to install this library is through `pip` or `easy install`:

```
$ pip install skosprovider_heritagedata
```

This will download and install `skosprovider_heritagedata` and a few libraries it depends on.

## Supported Heritagedata thesauri

The webservices provides by [heritagedata.org](#) provide access to multiple vocabularies or conceptschemes. You can select one of these vocabularies by passing a `scheme_uri` to the constructor of the `HeritagedataProvider`.

Heritagedata Vocabulary schemes

An overview of all `scheme_uri` can be provided by the following service:

[www.heritagedata.org/live/services/getSchemes?pretty](http://www.heritagedata.org/live/services/getSchemes?pretty)

```
[  
 {  
     "uri": "http://purl.org/heritagedata/schemes/agl_et",  
     "label": "EVENT TYPE (EH)",  
     "label lang": "en",  
     "description": "Terminology used for recording archaeological and  
     ↪architectural investigative, data collection exercises; from intrusive  
     ↪interventions to non damaging surveys",
```

```
        "attribution": "English Heritage"
    },
    {
        "uri": "http://purl.org/heritagedata/schemes/1",

        "label": "MONUMENT TYPE THESAURUS (WALES)",
        "label lang": "en",
        "description": "Classification of monument types in Wales by function",
        "attribution": "RCAHMW"
    }
]

```

# CHAPTER 2

---

## Using the providers

---

### Using HeritagedataProvider

The HeritagedataProvider is a general provider for the Heritagedata vocabularies. Its use is identical to all other SKOSProviders. A scheme\_uri is required to indicate the vocabulary to be used. Please consult [Supported Heritagedata thesauri](#) for a complete list.

```
#!/usr/bin/python
# -*- coding: utf-8 -*-
"""
This script demonstrates using the HeritagedataProvider to get the concept of
'POST MEDIEVAL'.
"""

from skosprovider_heritagedata.providers import HeritagedataProvider

periodprovider = HeritagedataProvider(
    {'id': 'Heritagedata'},
    scheme_uri='http://purl.org/heritagedata/schemes/eh_period'
)

pm = periodprovider.get_by_id('PM')

print('Labels')
print('-----')
for l in pm.labels:
    print(l.language + ': ' + l.label + ' [' + l.type + ']')

print('Notes')
print('-----')
for n in pm.notes:
    print(n.language + ': ' + n.note + ' [' + n.type + ']')
```

## Finding concepts

See the `skosprovider_heritagedata.providers.HeritagedataProvider.find()` method for a detailed description of how this works.

```
#!/usr/bin/python
# -*- coding: utf-8 -*-
'''
This script demonstrates using the HeritagedataProvider to find the concepts with
↳ 'iron' in their label
'''

from skosprovider_heritagedata.providers import HeritagedataProvider

periodprovider = HeritagedataProvider(
    {'id': 'Heritagedata'},
    scheme_uri='http://purl.org/heritagedata/schemes/eh_period'
)

results = periodprovider.find(
    {
        'label': 'iron',
        'type': 'concept'
    }
)

print('Results')
print('-----')
for result in results:
    print(result)
```

## Using expand()

The expand methods return the id's of all the concepts that are narrower concepts of a certain concept or collection.

See the `skosprovider_heritagedata.providers.HeritagedataProvider.expand()` method for a detailed description of how this works.

```
#!/usr/bin/python
# -*- coding: utf-8 -*-
'''
This script demonstrates using the HeritagedataProvider to expand a concept
'''

from skosprovider_heritagedata.providers import HeritagedataProvider

periodprovider = HeritagedataProvider(
    {'id': 'Heritagedata'},
    scheme_uri='http://purl.org/heritagedata/schemes/eh_period'
)

results = periodprovider.expand('PM')

print('Results')
print('-----')
```

```
for result in results:  
    print(result)
```

# CHAPTER 3

---

## Development

---

Skosprovider\_heritagedata is being developed by the [Flanders Heritage Agency](#).

Since we place a lot of importance on code quality, we expect to have a good amount of code coverage present and run frequent unit tests. All commits and pull requests will be tested with [Travis-ci](#). Code coverage is being monitored with [Coveralls](#).

Locally you can run unit tests by using [pytest](#) or [tox](#). Running pytest manually is good for running a distinct set of unit tests. For a full test run, tox is preferred since this can run the unit tests against multiple versions of python.

```
# Setup for development
$ python setup.py develop
# Run unit tests for all environments
$ tox
# No coverage
$ py.test
# Coverage
$ py.test --cov skosprovider_heritagedata --cov-report term-missing tests
# Only run a subset of the tests
$ py.test skosprovider_heritagedata/tests/test_providers.py
```

Please provide new unit tests to maintain 100% coverage. If you send us a pull request and this build doesn't function, please correct the issue at hand or let us know why it's not working.

# CHAPTER 4

---

API Documentation

---

**Providers module**

**Utils module**

# CHAPTER 5

---

## History

---

### 0.3.1 (2017-09-06)

- Stop loading the conceptscheme while initialising the provider.
- Add support for Python 3.6

### 0.3.0 (2016-08-11)

- Compatible with SkosProvider 0.6.0.
- Allow passing a custom requests Session to a provider. (#14)

### 0.2.1 (2015-03-10)

- Fix an issue where calls that include a *language* parameter would fail because certain methods were not expecting extra keyword parameters. (#12)
- Some documentation clarifications. (#11)

### 0.2.0 (2014-12-19)

- Compatible with SkosProvider 0.5.0.
- Each Concept or Collection now also provides information on the ConceptScheme it's part of.
- Fix some issues with UTF-8 encoding.
- Fixed some issues with Python 2.x/3.x compatibility.
- Provider now throws a ProviderNotAvailableException when the underlying service is down.

## **0.1.0 (2014-10-08)**

- Initial version
- Compatible with SkosProvider 0.3.0.

# CHAPTER 6

---

## Glossary

---

**EH** English Heritage.

**RCAHMS** The Royal Commission on the Ancient and Historical Monuments of Scotland.

**RCAHMW** The Royal Commission on the Ancient and Historical Monuments of Wales.

**RDF** Resource Description Framework. A very flexible model for data definition organised around *triples*. These triples forms a directed, labeled graph, where the edges represent the named link between two resources, represented by the graph nodes.

**SKOS** Simple Knowledge Organization System. An general specification for Knowledge Organisation Systems (thesauri, word lists, authority files, ...) that is commonly serialised as *RDF*.

**URI** A *Uniform Resource Identifier*.

**URN** A URN is a specific form of a *URI*.
